Commissioner

Memorandum

Date: 11/24/2010

To: Greg Zalaskus, Case Manager
Bureau of Emergency Response

From: Joseph Marchesani, Hydrogeologist
Bureau of Ground Water Pollution Abatement

Subject: Picatinny Arsenal, U.S. Army Garrison, New Jersey
Final Remedial Action Work Plan, Group I Sites (PICA 079)
September 2010

The Bureau has received and reviewed the subject document. The document is acceptable as submitted.

Monitored Natural Attenuation is proposed for this natural attenuating ground water plume of RDX and TNT. Ten monitoring wells are proposed for natural attenuation monitoring. These wells 157MW-1, 157MW-1D, 157MW-2, 157MW-3, 40MW1, 40MW-1D, 40MW-2, 40MW-2D, 40MW-3, 40MW-4, 40MW-5, 40MW-6, and 93MW-2 are acceptable.

Parameters for analysis include the 5 COC's (explosives list only) detected plus indicators. The monitoring frequency proposed is quarterly for 2 years, then semi annually for three years. "Hydrasleeve" is the proposed sampling method, with deployment 2 (two) weeks prior to ground water sample withdrawal.
