Classification: **UNCLASSIFIED**

Caveats: NONE

Bill and Joe (Greg):

As a follow-up to my messages to Bill today, I am providing the following additional information that came this afternoon from ARCADIS:

- The sample from 2MW-16 collected last week contained 36.8 ug/L of carbon tetrachloride. Therefore, injection wells 2IW-2 and 2IW-3 and monitoring well 2MW-25 will be installed. Monitoring well 2MW-25 will be sampled as soon as possible and a decision on the installation of the two southernmost injection wells in injection line 1 will then be made.
- ARCADIS will also install two additional monitoring wells (2MW-26 and 2MW-27) up-gradient of wells MW47-101 and MW47-102 at the approximate locations shown on the attached figure

I was just out at the site and the well density for this 'hot spot' location is and will be very high.

Caveats: NONE

Bill:

Despite the emails of last week discussed in my earlier email today to Bill, enclosed please find RTCs on the Group 3 RD form EPA, the NDEP and internal comments from USACE. I believe the Final RD will be the result of the ongoing work described in my earlier email.
